If you have a problem communicating to your clients about a product, system, process, or equipment, give us a call for a solution!

Some of the technical writing projects I have been involved with:

1. Scientific Posters for Siemens-Memcor
2. Water system documentation for Siemens Australia
3. Preparing technical information (Repco Auto-Tech Encyclopedia)
4. Preparing help files for proprietary software (Sigma Plus Consulting)
5. Writing a help file system for IDS Enterprise Systems 'MotoV8' product
6. Writing a user manual for Talman's Steel Supply Chain Management System
7. Managing documentation for Metso Minerals
8. Technical writing for Australia Post
9. Managing documentation for Tyco Safety Products
10. Designing, delivering manuals for a lane changing system
11. Writing and compiling help files for a motorway management system
12. Preparing a protocol and procedures manual for an outdoor adventure club (MUAS)
13. Designing and building websites
14. Political party policy documents

We really enjoy the sort of work that requires learning and deciphering how a new product or equipment works and designing effective information packages for you the client, and your end customer.

We are specialists in writing in plain English, writing simple instructions. Don't forget too, we can create illustrations that convey thousands of words.
